

PRAMA Building Solution

One Integrated Solution for Every Need

Requirement Analysis

Personnel Safety

- Protecting the safety of employees' lives and property;
- Preventing illegal persons and vehicles from intruding;
- Evidence collection after Personnel dispute.

Property Safety

- Protecting Key Facilities of Enterprises;
- Low efficiency of daily inspection by security guards.
- Protecting restricted regions;
- Prevention of theft and sabotage;
- Transforming post-inquiry into pre-warning.

Internal Management

- Standardized personnel management;
- Standardized vehicle management;
- Low efficiency of device maintenance because large amount of devices need to be managed.
- Information-based management.

Solution Over View

Command Center

As more and more information gets processed at command centers, management teams must utilize automated tools for an effective workflow. PRAMA's VMS caters to these exact needs, enhancing command center efficiency in many ways: a more automated system that checks device status for you, smarter network adaptation functions, and useful alarm management procedures that can be incorporated into your existing SOPs.

Alarm System

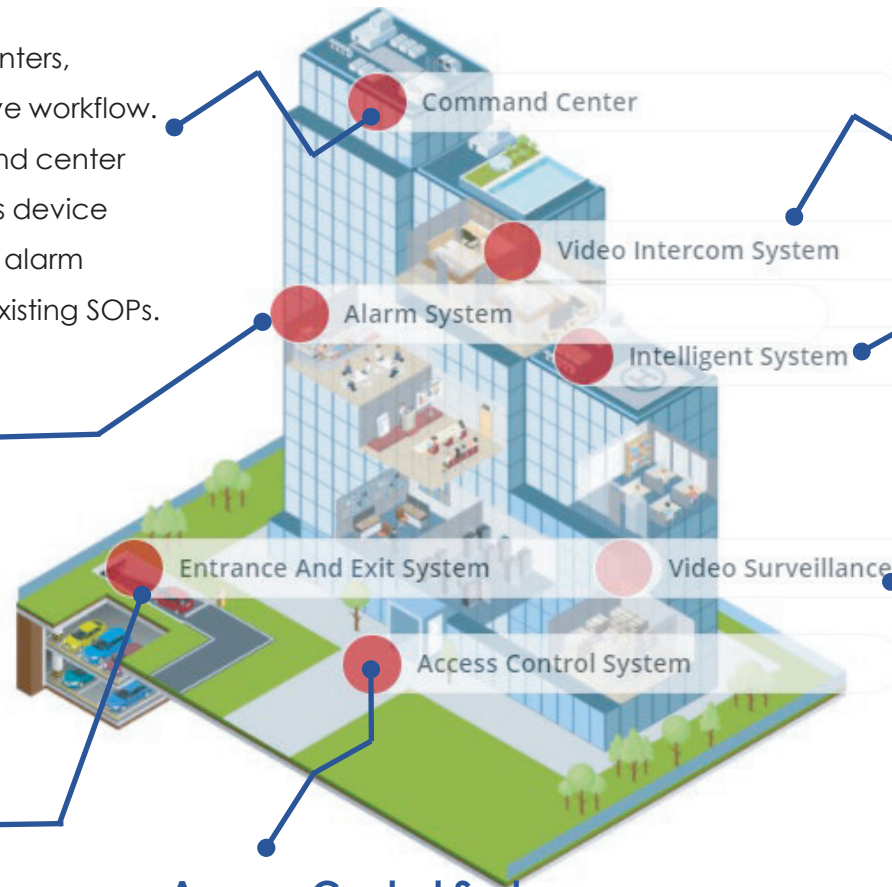

Alarm systems provide important security solutions for buildings. By providing security measures that focus on very specific needs and risks. On top of a conventional alarm system, an emergency system is also available to provide extra help when events occur.

Entrance & Exit System

A good parking system can improve everyday life for residents and employees. Since the majority of the vehicles in a private lot are regulars, having a system that can automate the vehicle entry process quickly is a welcome benefit.

Access Control System

PRAMA offers complete and adaptable access control solutions for commercial buildings of all kinds., which add up to the value of the real estate. Apart from face recognition, we can also have card readers as an easy and cost-effective solution.

Video Intercom system

Most buildings, whether commercial or residential, require a video intercom system to assist communication and entry control.

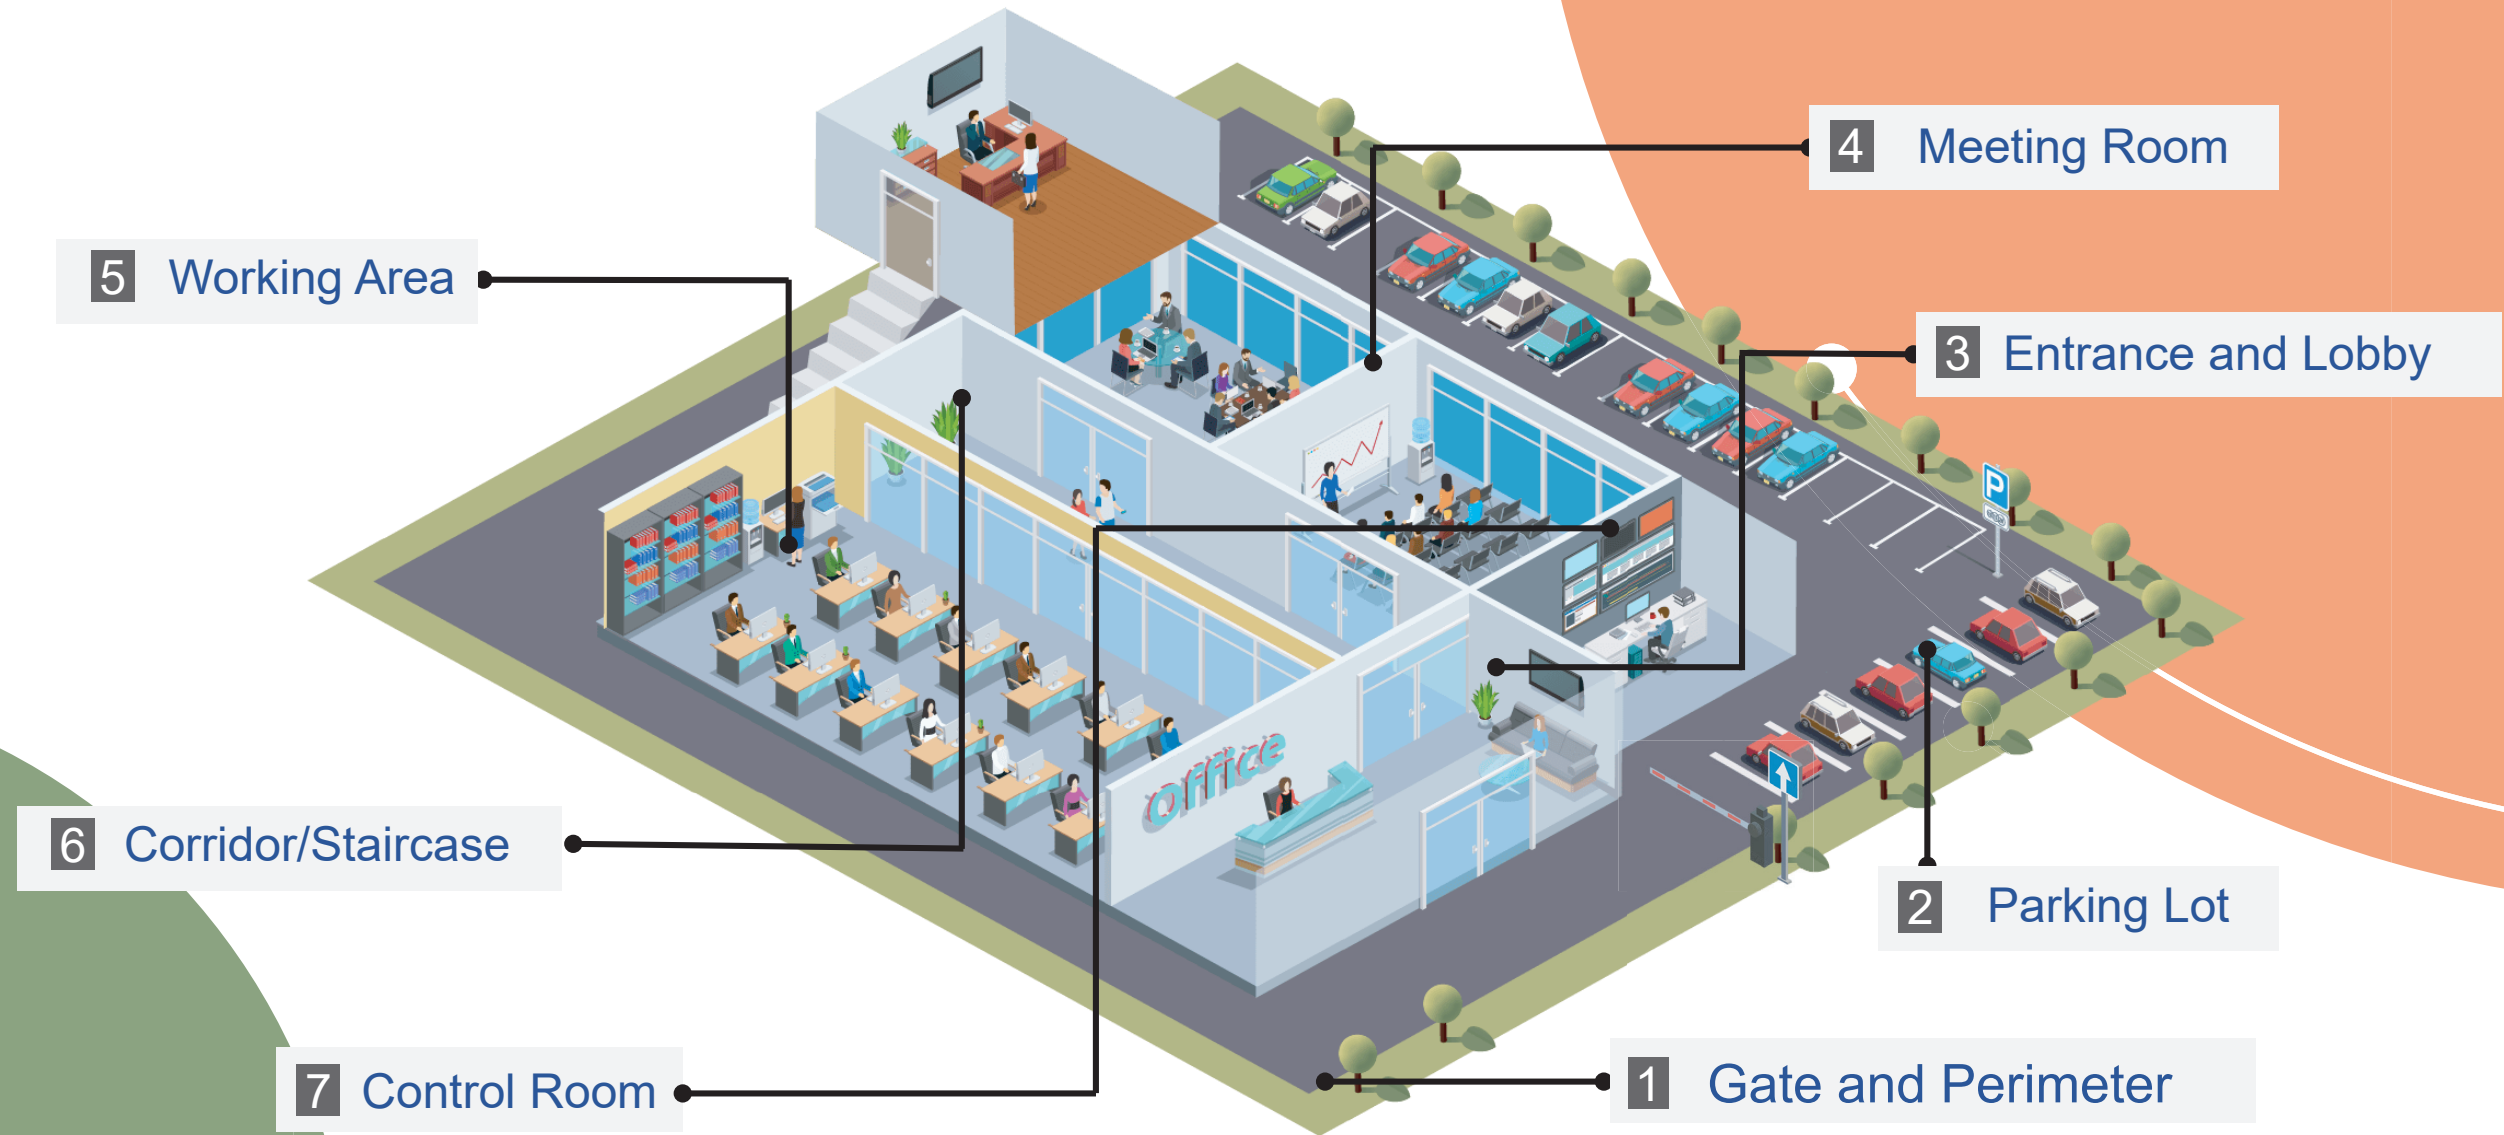

Intelligent System

To reduce operational costs and enrich the user experience, PRAMA offers a wide variety of intelligent products and functions – this includes people counting, heat mapping, and Intelligent-learning-based perimeter protection.

Video Surveillance

PRAMA Provides security cameras for every specific building-security need – indoor and outdoor areas, corridors, panoramic scenes, and much more. They provide intrusion detection featuring real-time alerts and deterrents based on video content analytics, along with 24/7 color imaging – which is most helpful when forensic evidence is needed.

Gate and Perimeter

Perimeter Protection

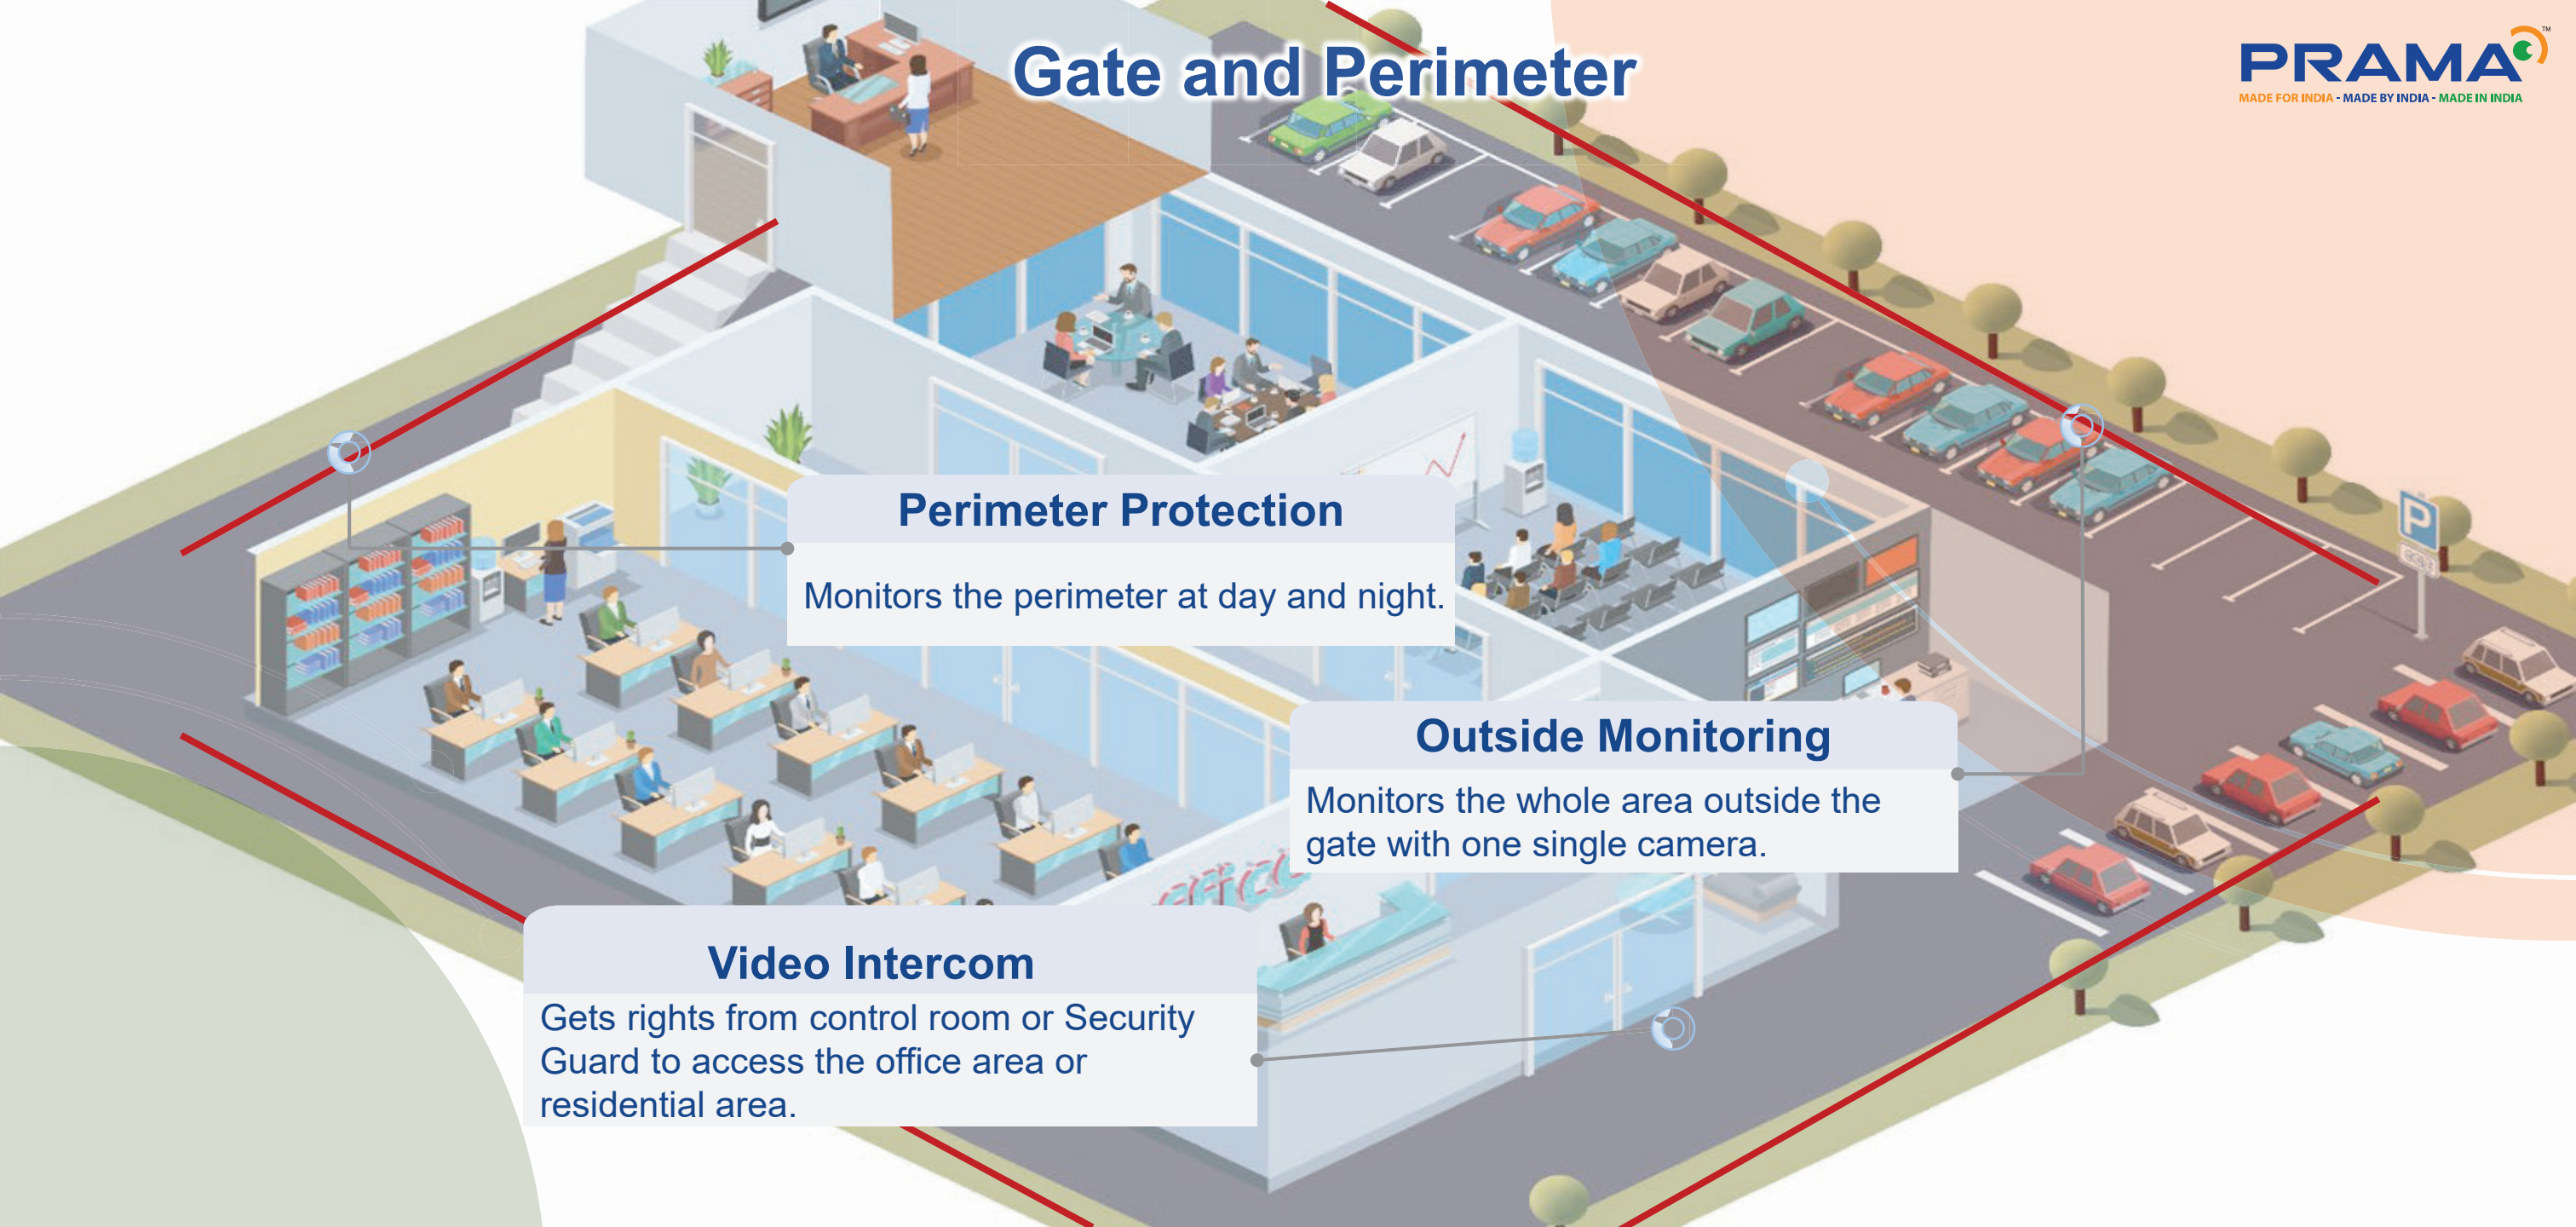

Monitors the perimeter at day and night.

Outside Monitoring

Monitors the whole area outside the gate with one single camera.

Video Intercom

Gets rights from control room or Security Guard to access the office area or residential area.

Parking Lot

Panoramic Monitoring

Monitors the parking lot with Panoramic camera.

Entrance & Exit Management

Controls barrier automatically and saves human resources.

Entrance and Lobby

Lobby Monitoring

360° panoramic monitoring for the whole lobby.

Entrance Monitoring

Captures human faces clearly even against strong backlight.

Meeting Room

(Commercial Buildings)

Panoramic Monitoring

360° panoramic monitoring for the meeting room.

Working Area (Commercial Buildings)

Intrusion Detection

Detects night-time intrusion while off-work.

Panoramic Monitoring

360° panoramic monitoring for the working area.

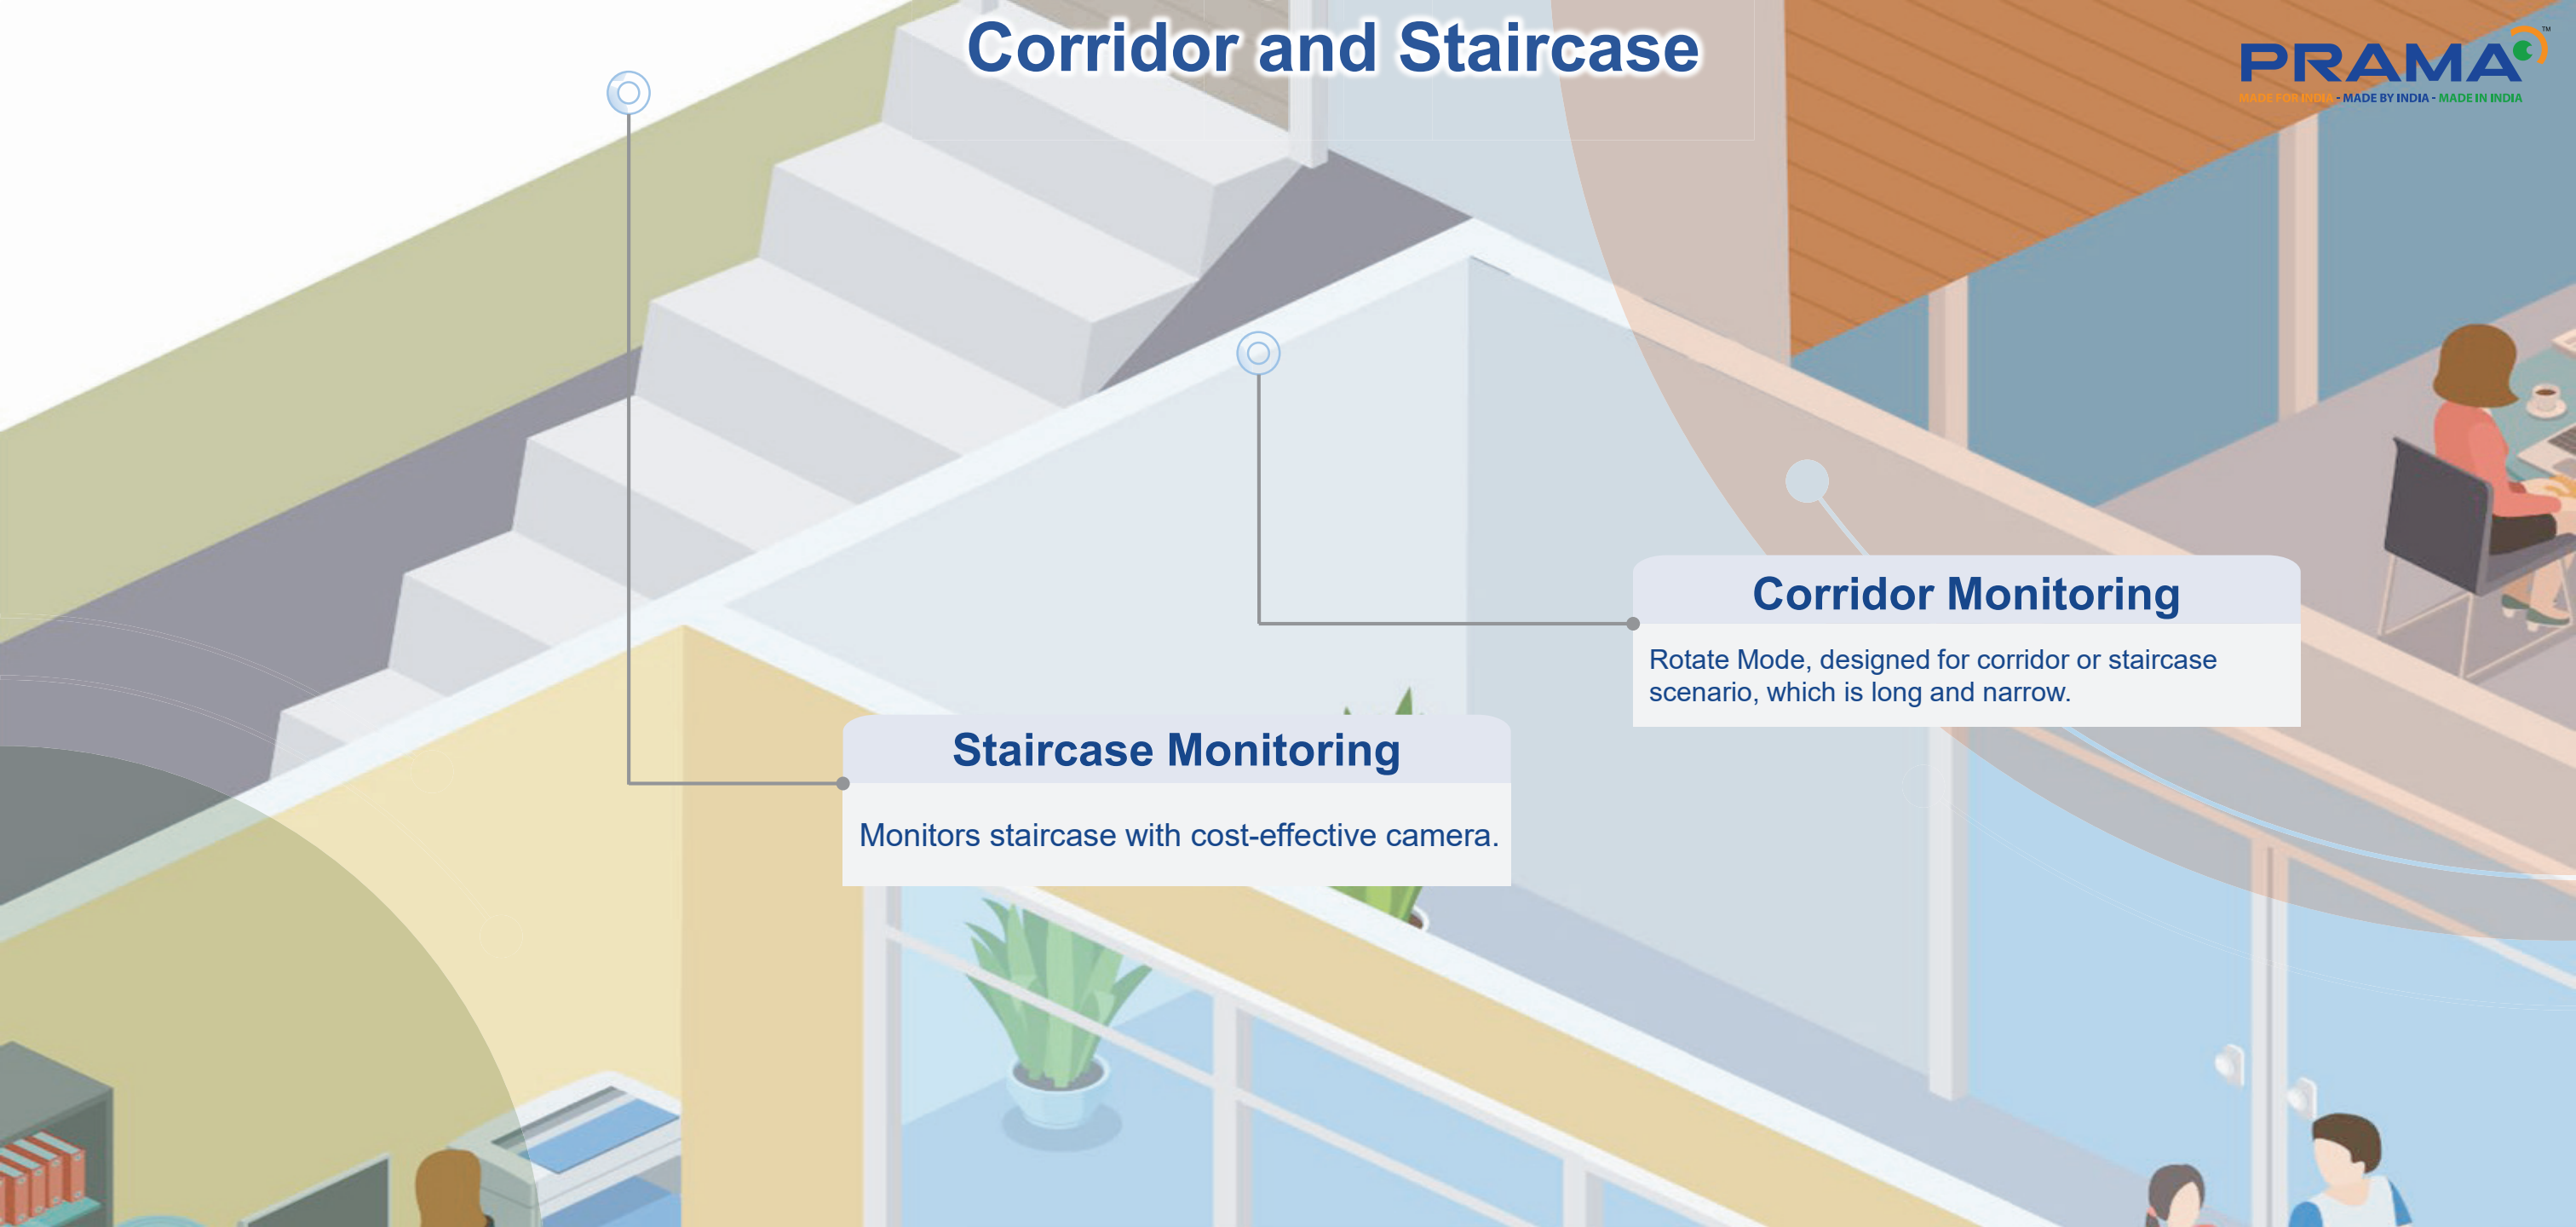

Corridor and Staircase

Staircase Monitoring

Monitors staircase with cost-effective camera.

Corridor Monitoring

Rotate Mode, designed for corridor or staircase scenario, which is long and narrow.

Entrance and Lobby

(Commercial Buildings)

Advertising Display

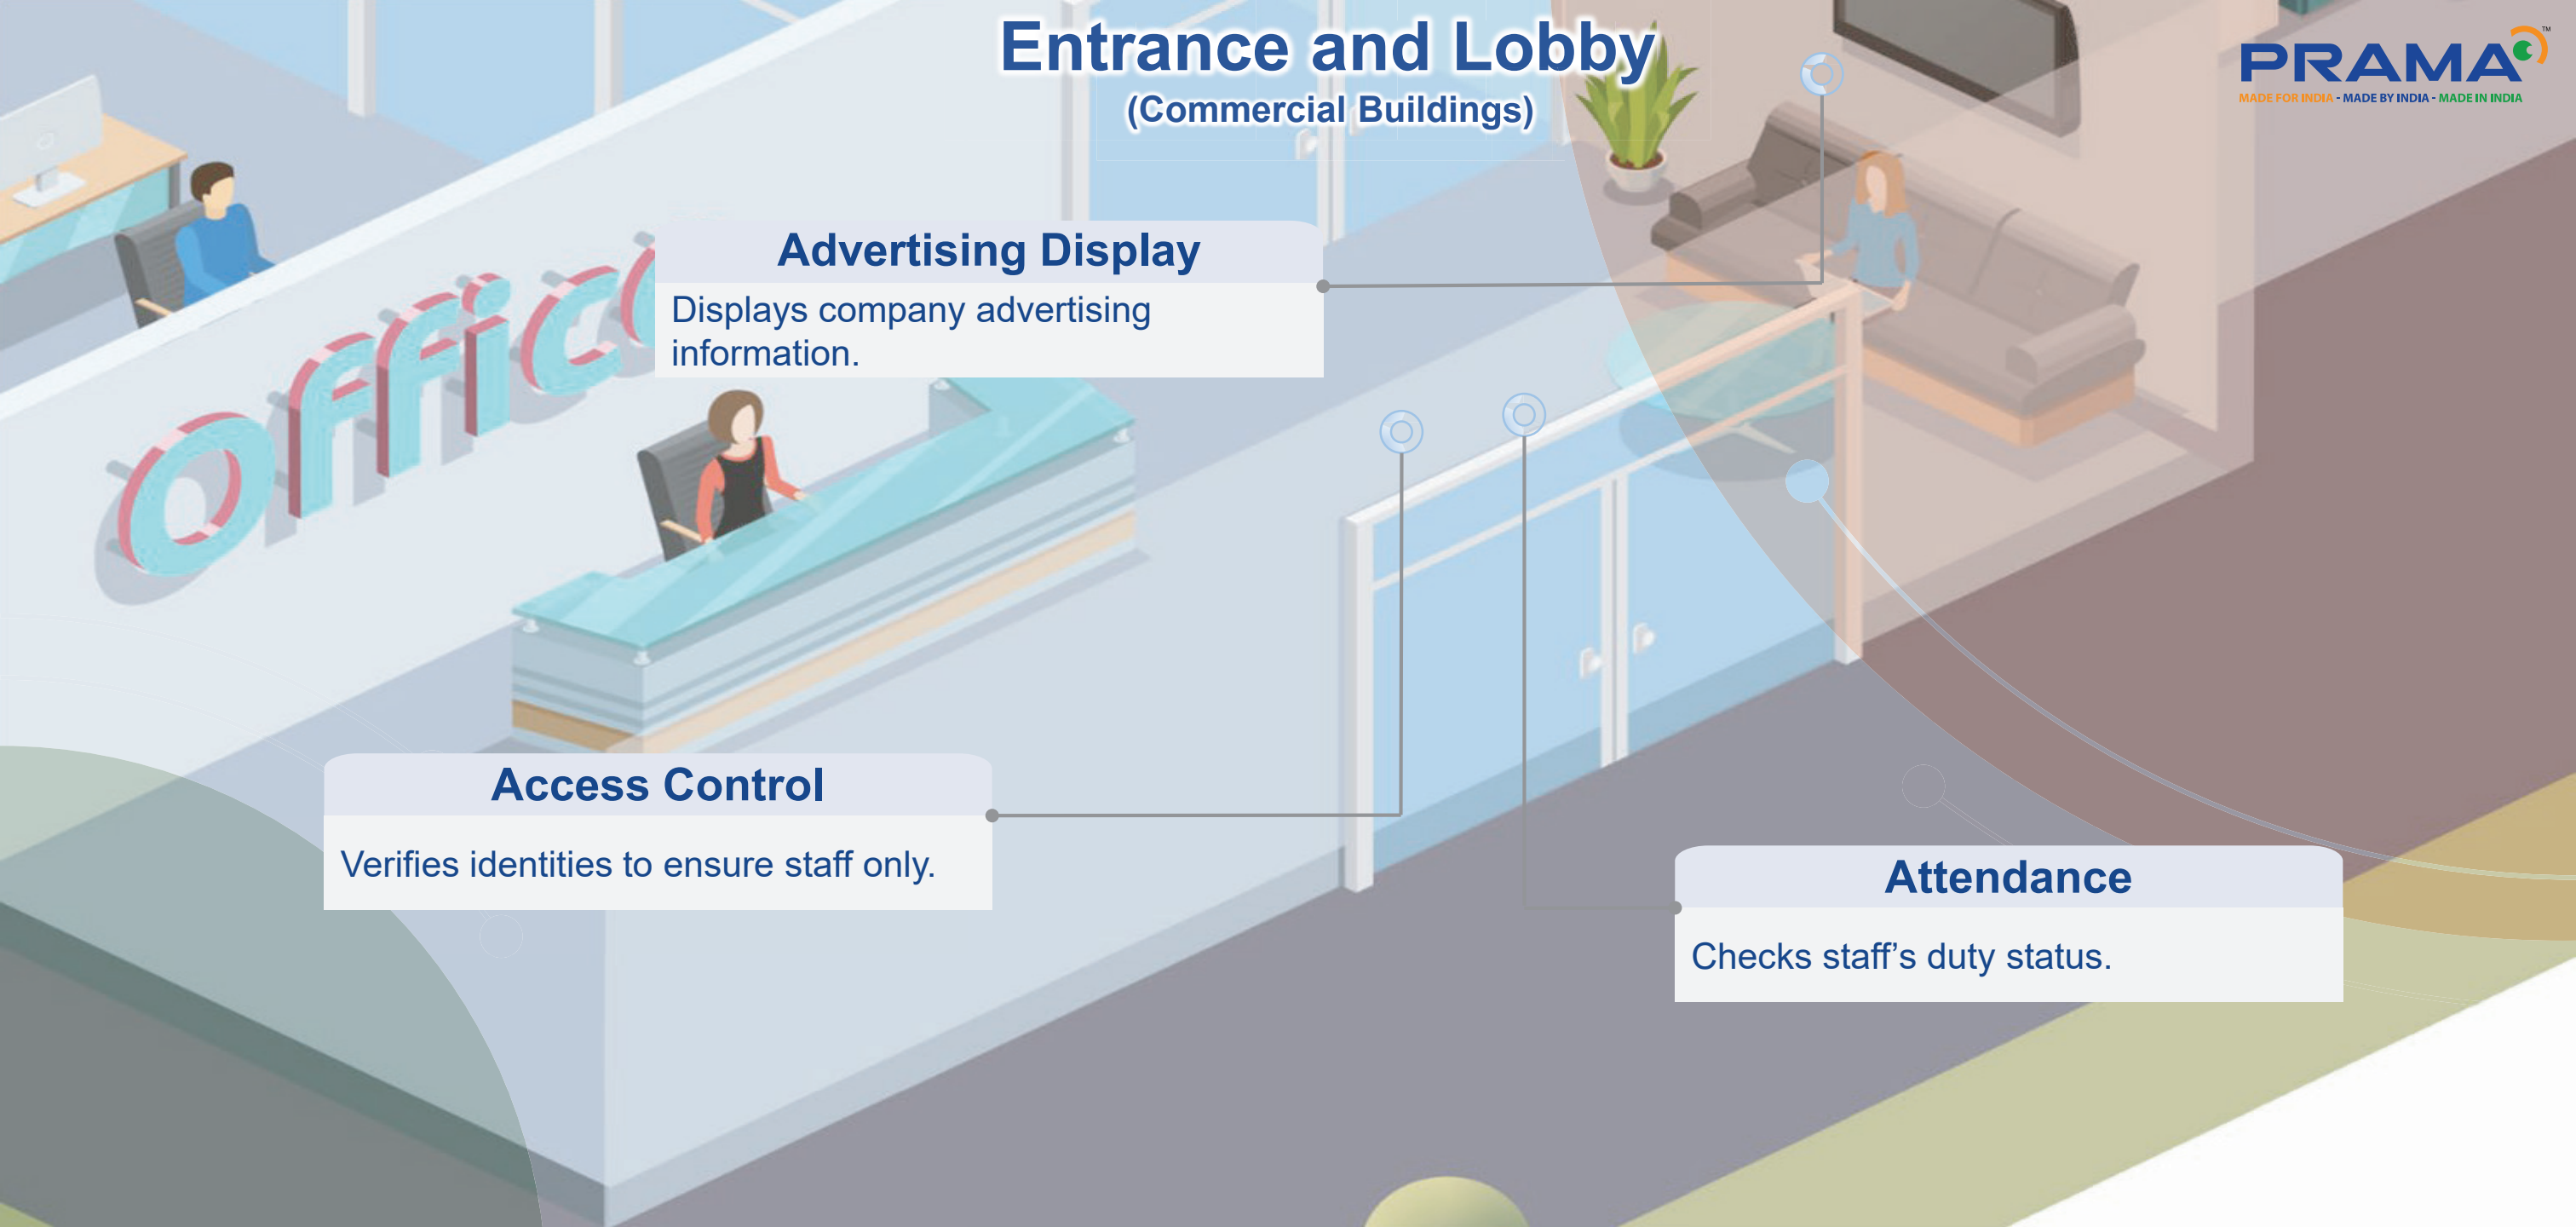

Displays company advertising information.

Access Control

Verifies identities to ensure staff only.

Attendance

Checks staff's duty status.

Meeting Room

(Commercial Buildings)

Smart Meeting

Simple, efficient and intelligent meeting.

Working Area

Access Control

Verifies identities to ensure staff only.

First Card Authentication

No entry until the manager comes every morning.

Control Room

Access Control Management

Manages the users and their permission.

Control Room

Video Management

Monitors video centrally to raise security level and efficiency.

Health Monitoring

Ensures the whole system performing well.

Alarm Management

Responds to alarms at first time to eliminate risks.

Video Storage

Video storage and retrieve.

PRAMA
MADE FOR INDIA - MADE BY INDIA - MADE IN INDIA

System Advantages

Solving the pain points and achieving requirements

Security Protection

Based on 24-hour HD video surveillance, ANPR, intrusion detection and so on, the goals of security protection can be achieved.

Employee Management

(For commercial Building)

Employee management helps to protect the safety of internal areas and improve the efficiency of personnel access and attendance.

Centralized Management

Not only can the unified management platform achieve functions of video management, health monitoring and alarm management, but also allows future upgrading.
